Peter Christian Agbenyega

HEALTHCARE CLOUD SECURITY & PURPLE TEAM ENGINEER

Oneida, New York | 315-316-5855 | peter.cagbenyega@gmail.com
petercagbenyega.com | github.com/Peter-Agbenyega

PROFESSIONAL SUMMARY

Cloud and security engineer building on AWS, hybrid-cloud infrastructure, Kubernetes, Terraform and DevSecOps foundations. Developing healthcare cybersecurity, threat-emulation and Purple Team skills through HIPAA/ePHI study and authorized labs. Finalizing an M.S. in Cloud Computing Systems, expected December 2026, and pursuing a Graduate Certificate in Cybersecurity Technology at UMGC.

Work authorization: H-1B status; employer sponsorship required. Seeking qualifying cap-exempt or remote U.S. roles. Transfer eligibility and start date require employer counsel review.

CORE COMPETENCIES

Healthcare Learning: HIPAA/ePHI protection, healthcare cloud architecture; CPHIMS preparation (not earned; eligibility unverified).
Offensive Training: HTB CPTS goal; penetration testing, Nmap, Active Directory and exploit practice in authorized labs.
Defense: AWS security, IAM, Wireshark packet analysis; Linux/Windows hardening and permitted TLS-decryption exercises.
Cloud & Infrastructure: AWS, Proxmox VE, Docker, Kubernetes, Terraform.
DevSecOps & Automation: CI/CD, GitHub Actions, GitLab CI, Python/FastAPI, security scripting, Celery and Parquet.

FEATURED ENGINEERING PROJECTS

Healthcare-Focused Purple Team and Offensive Security Lab | Training / Lab Development

- Building isolated Proxmox-based practice alongside HTB Academy and ACW360 study. Information Security Fundamentals and the selected Penetration Tester path support the CPTS goal. Developing vulnerability-assessment, Active Directory and Python/Bash skills; no healthcare production deployment claimed.

Hybrid-Cloud Application Deployment | Independent Infrastructure Project

- Developing Vercel/Next.js frontend and Proxmox backend patterns with Python/FastAPI and Docker. Secure reverse proxying, encrypted connectivity, DNS and CORS are integration priorities; end-to-end production readiness remains to be validated.

Network Forensics and DevSecOps Pipeline Hardening | Authorized Lab Work

- Use Wireshark, network inspection and permitted TLS-decryption exercises to develop detection and hardening skills. Study Linux, AWS VPC controls and GitHub Actions pipeline security.

Quantitative Data Engines and Python Automation | Research Implementation

- Forex research code normalizes historical data and implements strategy-confirmation and average-true-range helpers. CASMI code implements Parquet loading, schema checks and spectrum processing. Research and backtesting are separate from live trading, rankings or healthcare deployment.

CERTIFICATIONS

AWS Certified Solutions Architect - Associate (SAA-C02) | AWS Certified Solutions Architect - Professional (SAP-C02) | AWS Certified Security - Specialty (SCS-C02)

EDUCATION

M.S. Cloud Computing Systems - In Progress, Expected December 2026 | UMGC
Graduate Certificate, Cybersecurity Technology - In Progress | UMGC
Bachelor of Education in Basic Education - Mathematics major | University of Education, Winneba

ADDITIONAL PROFESSIONAL EXPERIENCE

Upstate Caring Partners (UCP) - Habilitation Specialist / DSP | *Utica/Oneida, NY* | *2024-Present*

- Operate in a regulated, documentation-intensive environment requiring reliability, confidentiality, safety awareness, and precise incident reporting.
- Coordinate with multidisciplinary staff, follow established procedures, and maintain accurate records under time-sensitive conditions.

Education - Teacher | *Ghana* | *15+ years*

- Delivered structured instruction, guided learners with different needs, and translated complex concepts into clear, practical explanations.
- Built strong communication, documentation, mentoring, and problem-solving skills transferable to technical teams and stakeholder-facing work.
