

PETER CHRISTIAN AGBENYEGA

Cloud Security & DevSecOps Engineer

Utica, New York | (315) 941-5498 | peter.cagbenyega@gmail.com

github.com/Peter-Agbenyega | petercagbenyega.com | linkedin.com/in/peter-christian-agbenyega-910b3028b

AWS Certified: Solutions Architect – Associate (SAA-C03) · Solutions Architect – Professional (SAP-C02) · Security – Specialty (SCS-C02)

SUMMARY

Cloud security and DevSecOps engineer focused on making secure cloud infrastructure practical for organizations that depend on cloud systems but lack dedicated security teams. I design and publish open-source secure cloud baseline reference architectures and implementation guides that nonprofits, schools, small healthcare-adjacent services, and small businesses can reuse to reduce common misconfiguration risk. Three AWS certifications including the Security Specialty, with graduate study in cloud computing and cybersecurity at a U.S. institution.

AWS CERTIFICATIONS

AWS Certified Security – Specialty (SCS-C02) — IAM, KMS, GuardDuty, CloudTrail, VPC security, encryption, logging

AWS Certified Solutions Architect – Professional (SAP-C02) — advanced multi-account architecture design

AWS Certified Solutions Architect – Associate (SAA-C03) — foundational AWS architecture and service design

EDUCATION

Master of Science, Cloud Computing Systems — *In Progress*

University of Maryland Global Campus (UMGC), Adelphi, Maryland

Graduate Certificate, Cybersecurity Technology — *In Progress*

University of Maryland Global Campus (UMGC)

Bachelor of Education, Mathematics — 2012

University of Cape Coast, Cape Coast, Ghana

EXPERIENCE

Habilitation Specialist — Upstate Caring Partners, Utica, New York | *April 2024 to Present*

Provide direct support in a regulated human-services environment, with responsibility for documentation accuracy, confidentiality, and safety protocols. Reinforces the disciplined, compliance-aware habits that carry into secure infrastructure work.

Cloud / DevOps Engineer — Adcar Technology LLC (Remote) | *2019 to 2024*

- Designed and deployed AWS architectures using EC2, VPC, IAM, Lambda, and CloudTrail
- Built CI/CD pipelines with Git, Docker, and Jenkins, with security gate enforcement
- Hardened IAM roles using least-privilege principles to reduce attack surface
- Worked with PostgreSQL, MongoDB, and DynamoDB for application backends
- Supported migration of monolithic systems to containerized workloads on Kubernetes (EKS)

Founder — Cloud Nexus Hub LLC, Utica, New York | *2024 to Present*

Organizational foundation for independent technical documentation, open-source cloud security reference work, and public technical writing on secure cloud adoption for under-resourced organizations.

OPEN-SOURCE SECURITY REFERENCE ARCHITECTURES

Public reference architectures on GitHub, each documenting a reusable security or resilience pattern for teams without dedicated security staff.

- Secure Cloud Baseline Architecture — secure-by-design AWS baseline: segmented networking, controlled ingress, private workloads, IAM boundaries, encryption, logging, monitoring

- Cloud Security Controls Framework — identity, network segmentation, encryption, logging, detection, and remediation as one reviewable control flow
- Kubernetes Security Reference Architecture — EKS security: RBAC, namespace isolation, secrets handling, network policies, image security, audit visibility
- Secure DevSecOps Pipeline Reference Architecture — secret scanning, dependency review, SAST, IaC and container scanning, approval gates, audit evidence
- Multi-Region Cloud Resilience Architecture — regional continuity, DNS routing, replication, backups, health checks, failover planning

PUBLIC TECHNICAL WRITING

Author, *Cloud Security for Everyday America* — ongoing series of practical articles on secure cloud architecture, DevSecOps, and resilience for organizations without dedicated security teams. Published on petercagbenyega.com and professional platforms (2026).

SELECTED PERSONAL PROJECTS

Independent, non-commercial full-stack builds: **Cloud Nexus Pilot** (AWS security interview-prep tool), **UBAG Store** (e-commerce storefront), **WOMIEX** (bilingual EN/FR trade-information platform concept).

TECHNICAL SKILLS

Cloud: AWS (EC2, VPC, Lambda, RDS, S3, IAM, CloudTrail, GuardDuty, KMS, WAF, Config, Security Hub, Route 53)

Infrastructure as Code: Terraform, CloudFormation, OPA/Rego

Security Tooling: Gitleaks, Checkov, Trivy, OWASP ZAP, SonarCloud, IAM policy analysis

DevSecOps: GitHub Actions, Jenkins, security-gate CI/CD

Containers: Docker, Kubernetes (EKS), Helm, ArgoCD

Monitoring: CloudWatch, ELK, Datadog

Frameworks: NIST CSF, CIS AWS Benchmarks, AWS Well-Architected

Languages: Python, Bash, SQL, TypeScript
